

Limited Visual Dam Safety Inspection Summary Report

MA-090

Reservoir 92

Maui, Hawaii

Prepared by:

U.S. ARMY CORPS OF ENGINEERS HONOLULU ENGINEER DISTRICT

STATE OF HAWAII
DEPARTMENT OF LAND AND NATURAL RESOURCES

May 2006

Dam ID:	MA-0090	
Name: Re	eservoir 92_	

Limited Visual Dam Safety Inspection Conducted on: 04 April 2006

I. Purpose

Due to disaster occurrences of periodic heavy rains and flooding, which has caused extensive damage to property and loss of lives, the Governor has issued a State of Emergency Proclamation extending from February 20, 2006 to April 9, 2006. In light of the tragic failure of the Kaloko dam on Kauai and the continued forecast of heavy rains, emergency inspections of all regulated dams in all counties are being undertaken.

These inspections are for the purpose of determining if any of the regulated dams and reservoirs in the City and County of Honolulu, Maui County or Hawaii County, are suspect for immediate concern to the downstream area under the prolonged conditions of heavy rain showers.

II. Authority

Inspections are authorized under the Hawaii Dam Safety Act of 1987, Chapter 179D "Dams and Reservoirs" of Hawaii Revised Statues, and Title 13, Subtitle 7, Chapter 190, "Dams and Reservoirs" of the Hawaii Administrative Rules.

These inspections are being conducted under joint agreements of the U.S. Army Corps of Engineers (USACE), the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS), and the State of Hawaii. The Memorandum of Agreement with the U.S. Army Corps of Engineers is entered into pursuant to 10 U.S.C. § 3036(d)(2), and the Intergovernmental Cooperation Act (31 U.S.C. §6505), and established via support agreement number DL-06-01.

III. Scope

Visual inspection will be made on parts of the embankment and appurtenant works readily available and visible for inspection by the inspection team at the time of the inspection. Such parts and appurtenant works would include the upstream slope, crest, downstream slope, abutments and toes, outlet works, and spillway.

On the date of this limited visual inspection, there may appear to be no immediate threat to the safety of the dam, however no assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

Dam ID:	MA-0090	
Name: Re	eservoir 92_	

IV. Limitations of Findings and Recommendations

The inspection is based only on visible features/areas of the dam on the day of inspection. The inspection does not entail detailed stability, hydrologic, hydraulic, or seismic investigations. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies.

V. Inspection Team

Organization
U.S. Army Corps of Engineers
Henri Mulder, P.E.
Civil Engineer

State of Hawaii, Dept. of Land and Natural Resources Hiram Young

VI. Owner's Representatives Present

VII. Summary Report Team

Organization
U.S. Army Corps of Engineers
Derek Chow
Bill Empson

State of Hawaii, Dept. of Land and Natural Resources Denise Manuel Edwin Matsuda

VIII. Dam Type

The dam appeared to be an earthen embankment dam.

Dam ID:	MA-0090	
Name: R	eservoir 92_	

IX. Dam Classification

The current hazard classification of this dam is: Significant

Hazard Potential Classification based on the following:

Category	Loss of Life	Economic Loss
Low	None Expected	Minimal (undeveloped to
		occasional structures
		or agriculture)
Significant	Few (No Urban development and no more than a small number of inhabitable structures)	Appreciable (Notable agriculture, industry or structures)
High	More than a few	Extensive community, industry or agriculture.

Based on inventoried storage and height data, the size classification of the dam is: Most likely Small but insufficient information is available to inspectors to make a determination.

Size Classification based on the following:

Category	Storage (Acre-Feet)	Height (feet)
Small	< 1000	< 40
Intermediate	> 1000 and < 50,000	> 40 and < 100
Large	> 50,000	> 100

X. Summary of Inspection

Condition Rating Criteria: The conditional terms in this report are used to generally describe the conditions below. Inspections, monitoring, and additional investigations are considered to be incidental to all condition ratings.

Satisfactory	Expected to fulfill intended function.
Fair	Expected to fulfill intended function, but maintenance is recommended.
Poor	May not fulfill intended function; maintenance or repairs are necessary.
Unsatisfactory	Is not expected to fulfill intended function; repair, replacement, or modification is necessary.
Unknown	Not visible, not accessible, not inspected, or unable to determine the condition rating based on the observation taken.

Dam ID:	MA-0090	
Name: Ro	eservoir 92_	

A. General appearance:

The dam consists of an earth fill embankment. The dam is approximately 17 feet tall and 1200 feet long. The dam is fed by an irrigation ditch. The purpose of the reservoir is irrigation.

Findings and Corrective Actions:

- a. The Owner shall maintain documentations including Construction plans, specifications, improvements, modifications, Operations and Maintenance Manuals and routine inspection logs for this dam facility.
- b. An Emergency Action Plan (EAP) is recommended for all dams regardless of hazard class. Submit EAP if developed for the facility.
- c. Routine inspection logs were not inspected.
- d. Submit current Operations and Maintenance Manual or Procedures for this dam / reservoir facility.
- e. Submit Site or Facility Map of this Dam which identifies the location of major features including outlet works controls and conduits.
- f. Emergency Alarms / Monitors: There were no alarms or monitors observed on this reservoir.
- g. Power / Communication: There were no communication systems observed on this reservoir.

B. Access / Security:

Access to the dam was accomplished via a private roadway.

A four-wheel drive vehicle is required.

Security issues. Access to the dam is unrestricted.

C. Intake Works:

There was one intake.

The intake ditch is approximately 5' wide by 5' high and is square in shape.

The surface of the intake ditch is concrete.

The control for the intake ditch is by a gate where the flow can either be shut off or bypassed.

The source of water is from a ditch.

Findings and Corrective Actions:

- a. The intake works were not tested.
- b. The intake works appeared to be in satisfactory condition, no corrective actions are required at this time.

D. Reservoir:

The reservoir level was 10.5' feet per gage at the time of inspection.

The normal operating level varies from 9' to 11' feet.

Typical operation is kept within normal range.

The staff gage is a PVC pipe on the slope.

Dam ID:	MA-0090	
Name: Re	eservoir 92_	

Findings and Corrective Actions:

a. The reservoir was not inspected.

E. Upstream Slope: (Fair)

The upstream slope was 1 on 1 slope to 1 on 1.5 slope.

Inspection of slope was difficult to inspect due to dense vegetation.

Erosion, cracks and sinkholes were not visible at the time of inspection.

The owner needs to regularly remove vegetation from slopes.

Findings and Corrective Actions:

- a. The upstream slope appeared to be in fair to poor condition and requires corrective action.
- b. The upstream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- c. Tree(s) were observed on the downstream slope. Trees have been identified as the probable cause of piping failures, and can possibly cause severe damage to the embankment if they are uprooted during high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstruction the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

F. Crest: (Satisfactory)

The dam crest was approximately 40 feet wide.

There is a 10-foot wide dirt road access to the crest.

The crest has no vegetation.

Findings and Corrective Actions:

a. The dam crest appeared to be in satisfactory condition, no corrective actions are required at this time.

G. Downstream Slope: (Fair)

The downstream slope was approximately 1 on 1.

There was minor surface erosion at the time of inspection.

There was Haolekoa brush on the slope. The owner should continue with removal of vegetation.

There was no seepage observed at the time of inspection.

Findings and Corrective Actions:

- a. The downstream slope appeared to be in fair to poor condition and requires corrective action.
- b. The down stream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.

Dam ID:	MA-0090	
Name: Ro	eservoir 92_	

c. Tree(s) were observed on the downstream slope. Trees have been identified as the probable cause of piping failures, and can possibly cause severe damage to the embankment if they are uprooted during high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstruction the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

d. The slope was very steep, around a 1 to 1 slope; further study is required to verify slope stability.

H. Abutments / Toe: (Fair)

The owner should continue with the removal of vegetation along the downstream slope.

Findings and Corrective Actions:

- a. The abutments/toe appeared to be in fair to poor condition and requires corrective action.
- b. The abutment/toe area was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection

I. Outlet Works: (Satisfactory)

Outlet consists of one 30" diameter steel pipe.

The control of the outlet is with a valve that is on the downstream side.

Findings and Corrective Actions:

- a. The outlet works were not tested.
- b. The outlet works appeared to be in satisfactory condition, no corrective actions are required at this time.

J. Spillway: (Satisfactory)

This spillway is consisted of a channel. The spillway is located at the intake and flows along the concrete ditch along the down slope toe of the dam.

The spillway slope protection is of concrete.

The dimension is 9 feet. The invert elevation is 103 feet per NGVD.

The spillway approach was clear.

Erosion was not observed at the time of inspection.

Findings and Corrective Actions:

a. The Spillway appeared to be in satisfactory condition, no corrective actions are required at this time.

Dam ID:	MA-0090	
Name: Re	eservoir 92_	

K. Down Stream Channel: (Unknown)

Findings and Corrective Actions:

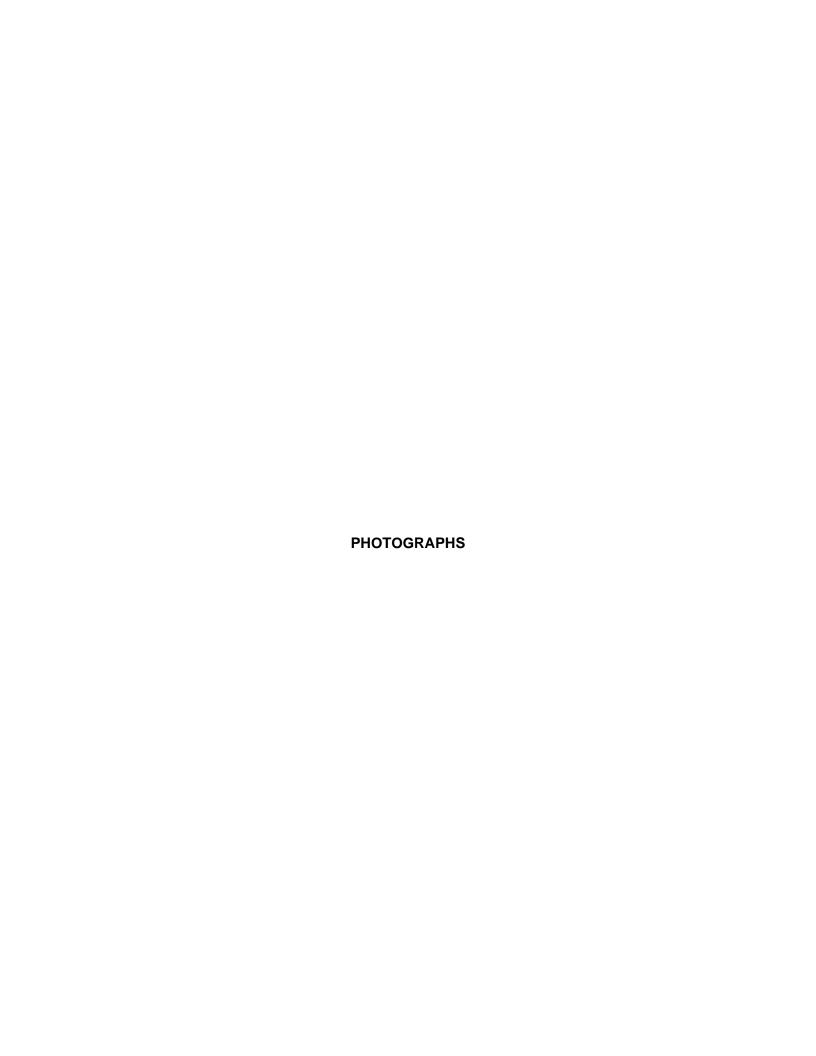

a. The downstream channel was not inspected.

XI. Additional Comments:

There is no immediate threat to the safety of the dam.

Recommendation:

The owner should continue with the periodic removal of underbrush and trees from the embankment and along the toe. Grasses should be kept short.

090 downstream 1 - Downstream slope. Note dense vegetation on the slope.

090 downstream 2 - Downstream slope. Note dense vegetation on the slope.

090 spillway

090 Upstream slope of the dam. Note trees on the slope.

Defect in Protection: Description:	
Approach:	······································
Description:	
Vegetation: □ None □ Low Ground Cover □ Bushes or Tall Grass □ Trees # □ <6" □ >6" & <20"	—————————————————————————————————————
Description:	G - 20
Findings:	
a. The Spillway appeared to be in satisfactory condition, no corrective actions are required at this time.	
 b. The Spillway appeared to be in fair to poor condition and requires corrective action. c. The Spillway appeared to be in unsatisfactory condition and not expected to fulfill its intended function. 	Iraont
corrective action is required.	Jigelit
On which Antiques	
Corrective Actions: ☐ d. Slope protection needs maintenance or repair. Description:	
□ e. The spillway approach was blocked. Clear approach.	
☐ f. Severe scour erosion was observed which requires maintenance and/or repair.	
Description:	
g. A headcut (vertical drop in channel due to erosion) was observed downstream of the spillway. Corrective action is required to prevent this problem from moving upstream.	3
☐ h. Trees are unacceptable in the spillway channel and approach. Take corrective action to address the woo	dy
vegetation problem and repair the damaged area. □ i. Unclear if spillway is adequately sized. Spillway should pass the probable maximum flood. Verify spillway	317
capacity and take corrective action as required.	ıy

Limitations and Intent of this Dam Safety Inspection:

This Dam Safety Inspection was conducted to assess the general overall condition of the reservoir/dam, identify visible deficiencies, and recommend areas of for monitoring, additional investigative studies and corrective actions. The inspection is based only on visible features/areas of the dam on the day of inspection. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies. The inspection was conducted under the authority of the Hawaii Revised Statures Chapter 179D, and Hawaii Administrative Rules, Title 13, Chapter 190, titled "Dams and Reservoirs". Questions regarding this inspection should be forwarded to the Hawaii State Dam Safety Program; PO Box 373; Honolulu, Hawaii 96809; Ph. (808) 587-0236.

Revised: Dec. 1, 2003
